

SKYSCREEN AND MOSQUITO SOLIMAR

SOLIMAR structures for skyscreens and mosquito were born to help shipyards during the fitting of flush deck hatches.

Structures are in fibreglass as our hatches and come with skyscreen, mosquito or both mounted.

The structure has the same size of the hatch. Height can be 150mm or 300mm and then it can be cutted to become the right size for each hatch. After painting, hatch and structure are a one piece.
