

**Mamba Pedestals**

The Mamba pedestal is built as 6S to suit the 875 series transmission, and certain 100 series applications depending upon rudder torque (please consult our technical division). The 8S model should be selected to mate with all 125 series systems, and 100 series systems using WRG 12 and WRG15/25 gearboxes, Mamba 6S is generally used with an 875 series system when a compass larger than 4 inch dial is specified.

Head and foot castings are of aluminium alloy as is the extruded tube. Shaft work is all Stainless Steel, carried in generous bearings. Bevel gears are precision cut in Nickel Aluminium Bronze. All Aluminium parts are pre treated with ICI's Alochrome process and painted with Croda Paints Ltd., resins electrostatically applied and baked to a beautiful durable finish.

Brake and compass wire are standard equipment.
