

Mamba 8S System

Mamba 8S

The Mamba 8S pedestal is constructed to suit 125 series transmission and should be used in conjunction with WRG12, WRG11J, IP3 gearboxes, (consult our technical division).

This pedestal is specifically designed for heavy duty and is generally intended for boats over 50ft in length, cruising, and 42ft+ racing machines. It is available either as a centre cockpit installation using the forementioned transmissions or as an aft cockpit installation with WRG12 or 11J close coupled. Head and foot castings are of aluminium alloy together with a heavy extruded tube. Shaft work is all 316 stainless carried in generous bearings. Bevel gears are precision cut in Nickel Aluminium Bronze. All aluminium is treated with ICI's alochrome process and painted with Croda Paints Ltd. resins electrostatically applied and baked to a beautiful durable finish. Brake and compass wire are standard equipment.
